JFW

Mr. Michael J. Kyle,
Examiner,
Technology Center

Dear Mr. Kyle:

Please let me first bring at your attention to Frey's Patent No. 1,034,008, dated July 30, 1912. By which you have rejected my patent claims, application No. 10/621,487.

Frey's drawing Fig.6 (part 13), and Fig. 7 (part14), which are the base of his invention should complement each other, both never do so. Both of these parts are identical, but do not fit each other. I tried and made a prototype of the figure. If we made a complement of the other, then it will act as one-way self-closing hinge, as he claimed. You have incorrect Frey's drawings, on which you are rejecting the invention, App. No. 10/621,487. Also, that vertical plane acts as stop, hinge can be rotate at any time opposite the vertical plane, and is not a locking feature which you are insisting on.

My hinge is locked, until be raised to rotating position. (causing to relies the door latch.)

Let me introduce myself, as a retired power plant engineer and utility suprivisor of American Embassy Tehran Iran, also a technical supervisor of a rubber shoe factory. I designed and made steam boilers, steam turbine, water softeners autoclaves, welding transformers, changing D.C. generators to alternators. I made our bleach chemical factory. I also made films and viewfinders for USIS. (I also planted and grafted thousands of trees, vines and roses as youngster.) Everything was left behind, when I immigrated to U. States. Here, I learned ten-programming computer languages.

Now at the age of 84, with macula degenerated eyes and blurred vision, I can see only by magnifying glass. I still noticed a 93 years old drawing mistake, accepted by your office.

The retirement is not much to pay \$1000 to attorney for this unfair Office Action.

Please reconsider this Office Action. Art unit 3676. Application No. 10/621,487.

You may see behind, the complement and corrected parts of Frey's Fig. 6-7 drawings.

Best regards,

Ara Dionysian

P.S. Actually this invention belongs to Department of States. I thought this 45 years ago, while I was employee, to use on Deputy Chief of Mission's swimming pool fence gate.
